

## ABSTRACT OF THE DISCLOSURE

A grip for a makeup brush having the grip, hair and a combining unit includes a synthetic resin core inside and a brilliant transparent resin layer on an outer surface of the core, and manufactured through the steps of molding a core by pouring core melt containing resin and pigment into a core mold and removing the core mold after coagulation; molding a grip by pouring transparent resin melt into a grip mold with the molded core fixed at the center of the grip mold and removing the grip mold after coagulation; cutting an outer surface of the molded grip smooth and cutting an end of the grip, which is combined with a combining unit, to have a rough surface with a reduced diameter by a lathe; and polishing the outer surface of the cut grip by using a sandpaper. This grip has better appearance and improved durability.
